Court Lighting Upgrade Guide

UPGRADING FROM HID TO LED IS EASIER THAN YOU THINK.

4 Easy Steps to Upgrade Your Lighting

BEFORE YOU GET STARTED.

If you have questions at any step or point of assessing your lighting needs, LSI is here to help and make it easy. An LSI Representative or Agent can help answer any question about your current lighting or pole situation and help you understand what type of fixture and performance level you need to upgrade your court and play area.

1 Determine Your Current Fixture, Pole and Pole Base Condition.

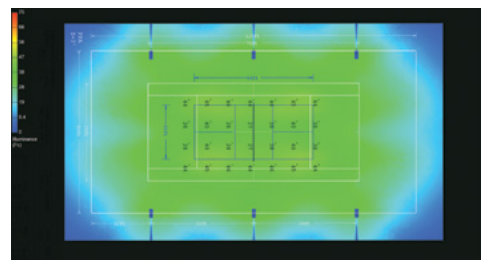

Many older HID or Sodium Lamp light fixtures like the examples above, use a similar box-like form factor and have an orange to yellow light output. Upgrading from HID fixtures to LED will *not* require any new type of power sources.

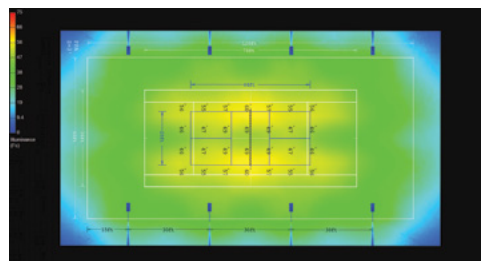

Check the condition of your light poles for cracking, heavy rust or even moderate to heavy cracking in the concrete base for the pole. If you are unsure as to the condition of the pole or pole base please contact an LSI Rep for help.

2 Select Your Performance Level for Your Court

PROFESSIONAL

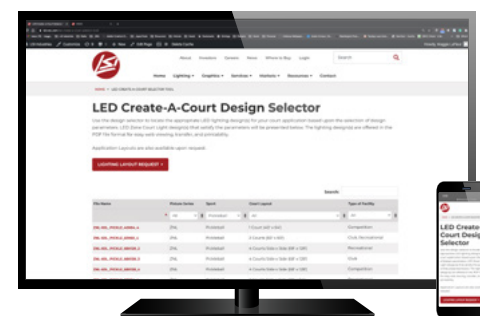

3 Choose Your Lights, Layout and Pole Configuration

Use the online **Create-A-Court Design Selector** to find the appropriate LED lighting design for your specific sports court lighting needs.

Create-A-Court Design Selector

Once you have determined the preferred level of lighting performance for your court, you should be able to use the LSI Court design selector to choose how many and what type of fixtures you will need. If you have any questions please contact an LSI Representative or Agent to help.

4 Light it Up!

Contact an LSI Representative or Agent to find local distributors, suppliers, and installation resources to help bring your new court lighting design to life.

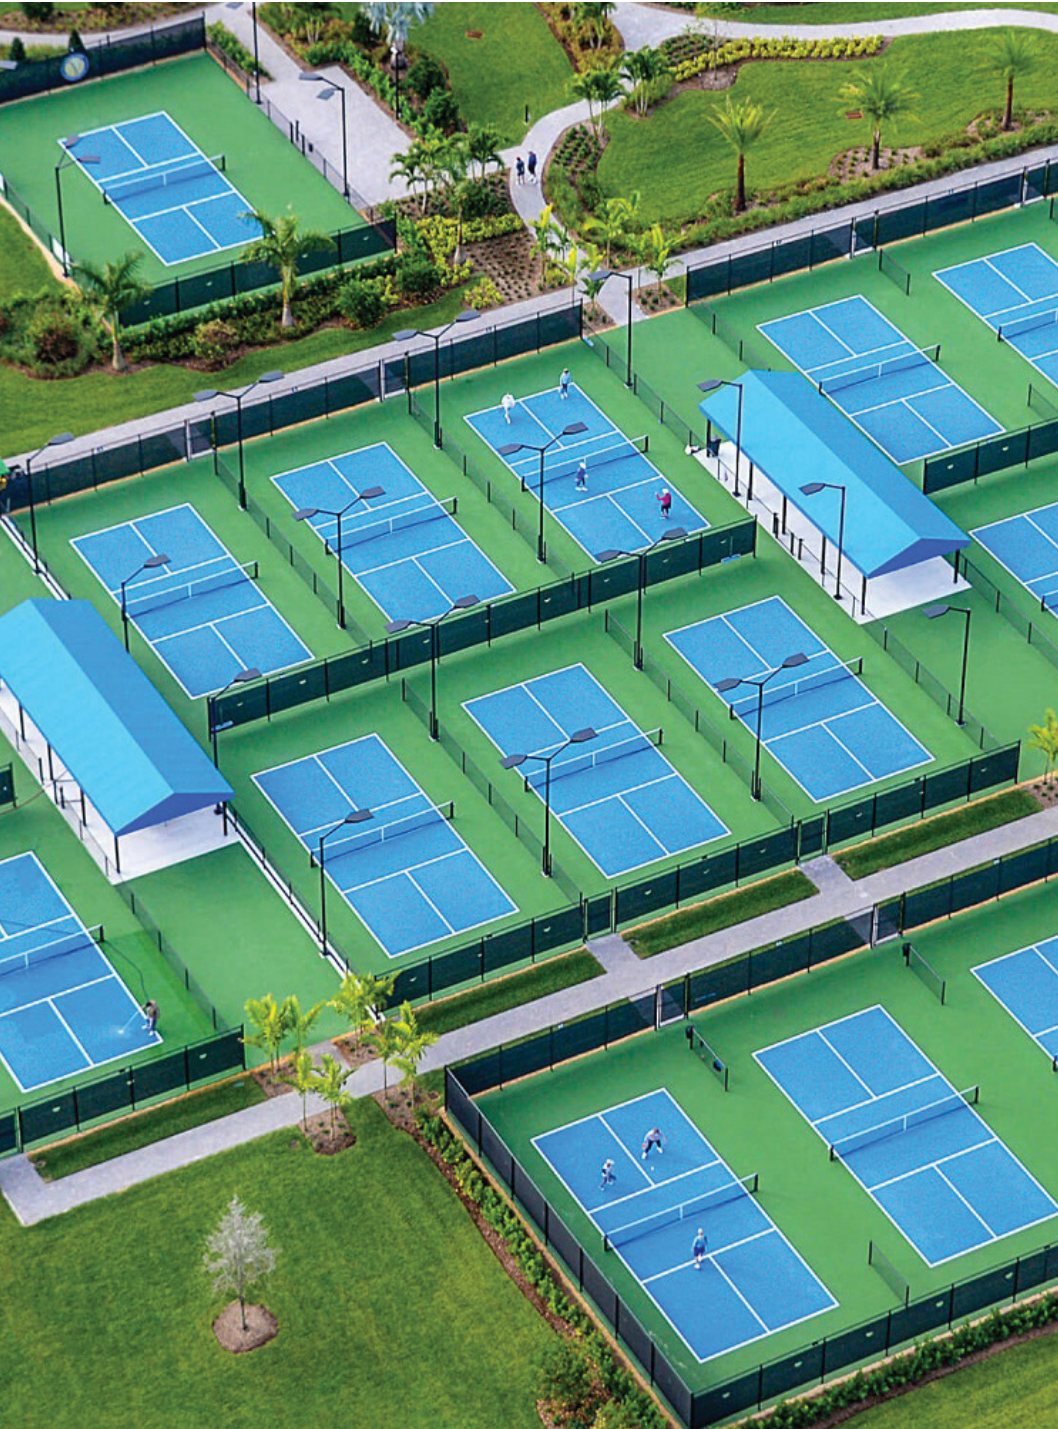

LSI Rep Locator

LSI offers a number of outdoor sport court light fixtures, pole brackets, and control systems to fit your court and pole size. Visit www.lscorp.com for a complete list.
